Wiki

1. What is the role of the datamodels in the VO?
2. Do we need to map data on a given datamodel?
3. Should data annotations be considered part of the data model specification or should they be model-agnostic?
4. Does the VO need one common annotation syntax?
5. What are the annotation expectations from a client point of view?
6. How to make the data annotation process affordable for data providers?
7. Do we expect TAP servers to be able to generate annotations in the future?
